OUTCOME MEASURES IN PRACTICE ECHO NETWORK

Network Aim: This network provides a platform for those developing, implementing and utilising outcome measures in clinical practice to share and learn about best practice.

**8 ECHO sessions**

**36 average participants**

**18 education & case presentations**

**Key Evaluation Findings**

- 95% agreed participation increased their knowledge of service initiatives across other services/teams.
- 83% implemented learning gained into practice.
- 100% would participate in this network again.
- 100% agreed Case Based learning as the focus for discussion is an impactful way of learning.
- 90% agreed participation supported the quality of practice and the care to patients and/or service users.
- 100% would recommend Project ECHO as a useful learning tool to others.

- 88% agreed participation helped to feel more supported in role.
- 93% found ECHO to be very helpful or extremely helpful compared to other online and virtual learning.
- 95% have shared their learning with other members of their team or service.
- 98% found the quality of the ECHO sessions as high or very high.

**What was most useful?**

- "Learning from the experience of others who have already implemented OACC. This has helped confidence in our own service."
- "I have enjoyed all the teaching sessions and project presentations have been very motivational and helpful."
- "So useful to see how other services do it, their challenges, assurances that we are doing OK with our own struggles."
- "Currently developing a national dataset for use in hospitals and the learning from the ECHO is helping in its development."
- "To share experiences and think about solutions together."
- "The interacting of subject matter experts and operating teams in dealing with both the theory and practice of OACC, the availability of resources and links to other resources."
